HAN-A TOOLS

High quality products to clients with competitive prices.

We, HAN-A TOOLS CO.,LTD. Established in 1999, HAN-A TOOLS CO., LTD. has succeeded in domestically producing coping saw blade used in DIY through 3years of R&D.

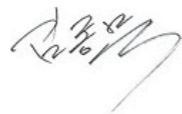

Hence, we developed and launched the "Magic Saw" (Coping Saw), and have strived to develop hand tools (Magic saw, Magic wrench, Magic sharpener and Magic cutter) and also kitchenware (Double side pan, Barbecue skewer grill and Monster cooker). Through the technology that has acquired 32 overseas and 87 domestic intellectual property rights, we provide our products to 40 countries including U.S.A., Japan, Germany, and France. To become a company endeared by our customers, we put utmost priority to quality and strive for customer satisfaction through trust and sincerity.

We always try to remember when we first started this business, Committed to becoming a leading enterprise and collaboration with our partners and customers based on our motto" to make valuable products that meet our customers".

Exporting 40 countries

MAGIC-SAW AGUR GRIP

HAN-A TOOLS

"Magic Saw Agur Grip" is a name reminiscent of crocodile ('Agur' in Korean) teeth, which don't let go of anything once they bite. The specially designed handle can be easily installed on various saw blades with just one touch.

AG1000

AG2000

24 HAN-A TOOLS CO., LTD.

PRODUCT

The Agur grip is a new-concept tool that can cut various materials such as metal, wood, plastic, aluminum, tile, and glass, depending on the type of saw blade, and it also enables agricultural activities such as gardening and mowing with the additionally configured hoe and sickle.

Carbon wooden saw blade

The carbon woodem saw blade is manufactured using the high-frequency heat treatment "hard impulse method," so the hardness of the teeth is stronger and it does not easily wear down, which means it can be used for a longer time than general saw blades.

Tungsten(Carbide) Saw blade

The tungsten (carbide) saw blade is made of a strong carbide that allows them to cut not only ceramics such as tiles, bricks and glass, but also metals such as stainless steel.

Carbon metal saw blade

The carbon hacksaw blade is functional saw blade mainly used for cutting metal and iron, and it can also be used with a more comfortable up and down sawing motion.

Roller cutter

The roller cutter makes easy to cut glass or tiles, even when it comes to straight curves and semicircles.

Gardening Hoe

The Agur Grip Gardening hoe is at an angle of 30 degrees, so it is easy to work with and can be used for many tasks, such as removing weeds from sidewalk blocks, planting seedlings, planting vegetables, digging sweet potatoes, planting flowers, digging ditches, pounding, and digging for medicinal herbs in the mountains.

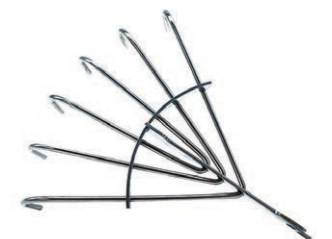

Sickle

The Agur Grip sickle has a saw blade, so it has the advantage of allowing you to cut grass without grabbing it. It can be used to cut various kinds of plants, such as grass, garlic chives, and barley (mowing, weed removal, harvesting water parsley).

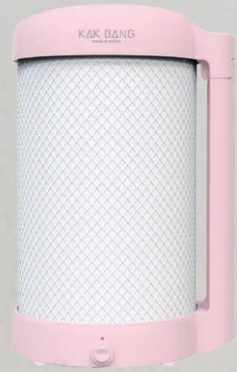

Rake

The Agur Grip rake is useful for clearing haystacks, weeds and seaweed, and cleaning up fallen leaves, debris, and straw. It's also good for digging up fish and shellfish in tidal flats.
